

Universal Web Signer

PKI Enable Your Web Applications for Windows, Mac OSX, Linux and more!

Make your secure web applications accessible to ALL your users!

The DBsign Universal Web Signer (UWS) adds PKI digital signature and authentication to web based applications accessed from all popular client operating systems and web browsers.

Used by millions of users in dozens of systems, DBsign is the "tried and true" digital signature solution for DoD environments.

Features and Benefits:

- **No Client-side Deployment:** runs inside the web page like an image or a Flash[®] animation – no installation required.
- **User Friendly:** no user training required.
- **Simple Integration:** no complex learning curve for web developers. Fully script-able for maximum integration flexibility.
- **Supports All Web Applications:** supports all major application environments (.Net, J2EE, PHP, and more) and web browsers (Internet Explorer, Safari, FireFox).
- **Secure Operation:** supports HSPD-12 PIV and DoD CAC smart cards. Uses FIPS 140-2 validated cryptography. Fully supports SHA-256/384/512. NIAP CCEVS validated as required by DoD directive 8500.1.
- **System Requirements:** 32/64 bit Windows XP/Vista/7, Mac OSX 10.5+, Linux; 32/64 bit Sun Java Runtime version 1.5 or higher.
